Bun Nita's Transformative Journey

Bun Nita, a 14-year-old eighth-grade student at Udom Meanchey Secondary School, lives in Damnak Trach Village, Kandol Commune, Teuk Chhou District, Kampot Province. Her father, Kim Buch (45), and her mother, Nuon Sara (40), are farmers. Nita is the second of three siblings.

Nita expressed her excitement about studying computer skills, stating that she feels happy and fortunate to have access to hands-on learning opportunities with modern equipment. She noted that her school is luckier than others nearby because it boasts brand-new computers, a spacious and clean computer lab, and the resources to provide practical training.

In just one month of attending the computer course, Nita has already learned how to turn computers on and off and recognize the keys on a keyboard. Although she had previously encountered computers in a limited capacity, her prior learning was sporadic and often interrupted because it required paying fees for each session. This inconsistency left her with only basic knowledge and minimal confidence.

SAMAKY *stories* SUCCESS

Now, thanks to the free, structured computer program offered by her school, Nita can fully immerse herself in learning without financial barriers. She is determined to excel in her studies and envisions using her newfound skills to assist with school administration tasks. She believes computer literacy will set her apart from her peers and give her an advantage in her future studies and career.

Nita expressed her heartfelt gratitude to Action Aid Cambodia and SAMAKY Organization for supporting her school with a well-equipped study facility, including a modern computer lab. She recognizes this as a transformative opportunity that empowers her to pursue knowledge and dreams she previously thought unattainable.
By embracing this learning journey, Nita has not only gained practical skills but also a renewed sense of confidence and purpose. Her story is a testament to how access to education and technology can transform young lives, paving the way for brighter futures.
